TRIAL HIGHER SCHOOL CERTIFICATE

1996

MATHEMATICS 3/4 UNIT

Time allowed - two hours (Plus 5 minutes reading time)

DIRECTIONS TO CANDIDATES

- * Student Number to be clearly written on the top of your front page.
- * All questions may be attempted.
- * Show all necessary working.
- * Staple ALL questions together.

Ji

QUESTION 1:

i) Solve
$$\frac{2x+1}{x-2} \ge 1$$
 for x and graph the solution.

ii) Evaluate
$$\int_0^{\frac{\pi}{2}} \frac{\sin x \, dx}{\sqrt{4 - \cos^2 x}} \quad \text{using } u = \cos x$$

iii) Solve for
$$x$$

$$\left(x + \frac{1}{x}\right)^2 - 10 \left(x + \frac{1}{x}\right) + 24 = 0$$

iv) Differentiate
$$tan^{-1}(log_e x)$$

v) Write down the 3rd term in

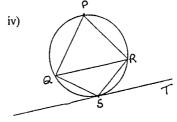

$$(3a - 2b)^4$$

QUESTION 2: (Start a new page)

i) Sketch
$$y = 2 \cos^{-1} \frac{x}{3}$$

Solve for
$$\theta$$
 3 sin θ + 4 cos θ = 3 0 $\leq \theta \leq 2\pi$ (Correct to 2dp.)

ii) The point P(6, 9) divides the interval AB in the ratio -3:2. Find the point B given that A is (1, 4)

ST is a tangent to the circle, and QR | ST. Copy the diagram and prove that

$$\alpha$$
) SQ = SR

β) SP bisects QPR

QUESTION 3: (Start a new page)

- i) If the probability of a hit in a single run is 0.1. Calculate the probability of a jet fighter getting exactly 2 hits on a target in 20 runs at the target.
- ii) a) Show that the equation

$$2x^3 - 3x^2 + 0.99 = 0$$
 has a root near $x = 1$.

- b) Attempt to find an improved value of this root by using Newton's Method once, starting with $x_0 = 1$.
- Explain why this attempt fails.
- iii) The polynomial $2x^3 + 3x^2 + \alpha x 6$ has (x + 3) and (2x + b) as factors. Find 'a' and 'b'

QUESTION 4: (Start a new page)

i) By using the principle of mathematical induction prove

$$\sum_{k=1}^{n} 5^{k} = 5 \left(\frac{5^{n}-1}{4} \right)$$

- (ii) a) What is a primitive function of $e^{f(x)}$. f'(x)?
 - b) Using part (a) evaluate $\int_0^1 \frac{e^{\cos^{-1}x} dx}{\sqrt{1-x^2}}$ (leave answer in irrational form)

- (a) Find the equation of the tangent I to the parabola at Q.
- (b) Derive the equation of the chord PQ and show that pq = -1 when PQ is focal chord.
- (c) Find the acute angle between the tangent I and the chord PQ If p = 3 and q = -0.2.

QUESTION 5 (Start a new page)

i) The velocity of a particle moving in S.H.M. in a straight line is given by

$$v^2 = 4x - x^2 ms^{-1}$$
 where x is displacement in m

- a) Find the two points between which the particle is oscillating.
- b) Find the centre of the motion.
- c) Find the maximum speed of the particle.
- d) Find the acceleration of the particle in terms of x.

- iii) A person walking along a straight road observes a tower bearing 045° T, the angle of elevation being 5°. After travelling a distance of 5000m, the tower bears 315° T and the angle of elevation is 8°.
 - a) Find the height of the tower (to 0.1m).
 - (b) Determine the angle which the road makes with a line bearing 090° T.

- i) a) Sketch the curves $y^2 = x$ and $x^2 = 8y$
 - b) Show that the area formed between these curves is given by

$$\int_0^4 \left(x^8 - \frac{x^2}{8} \right) dx$$

- The area is rotated about the x axis, find the volume of the solid of revolution so formed.
- ii) Let $f(x) = \sin^{-1} x + \cos^{-1} x$ $(0 \le x \le 1)$

Find a) f'(x)

$$\int_0^1 f(x) dx$$

iii) Newton's Law of cooling states that the rate at which a body cools is proportional to the excess of its temperature above that of its surroundings.

A sphere at a temperature of 70° C is placed in a container at a temperature of 20° C.

a) Show that $T = 20 + 50 e^{-kt}$ is a solution of the differential equation

$$\frac{dT}{dt}$$
 = -K (T - 20) where K is a positive constant.

b) If, after 2 minutes, the temperature of the sphere is 60° C approx.. show that

$$T = 20 + 50 e^{-0.11t}$$

c) Find the temperature of the sphere after 4 minutes (to the nearest degree).

QUESTION 7 (Start a new page)

i) A ball is thrown from a height 1 metre from the ground and is caught, without bouncing, 2 seconds later at a distance of 50m, also at a height of 1m. Assuming no air resistance and that gravity is approx. 10ms^{-2} you may assume $x = Vt \cos\theta$ and $y = -\frac{1}{2} gt^2 + Vt \sin\theta$

- 0 -

Find a) The velocity and angle of projection of the ball.

b) The maximum height of the ball above the ground during its flight.

- ii) For the expansion of $(a + bx)^n$ in ascending powers of x
 - a) Show that the expression for the ratio of the r^{th} and $(r+1)^{th}$ terms

is
$$\frac{T_{r+1}}{T_r} \cdot \frac{(n-r+1)}{r} \cdot \frac{bx}{a}$$

b) Two consecutive coefficients in the expansion $(3 + x)^{15}$ are equal. Find which terms these are.

-1-

Q1 (Lin'4) (45 - 26). : (4) T, & T2+1 $= {\binom{4}{2}} {(3a)^2} \cdot {(3b)^2}$ Question 8.
